About Us

AARRKKAA INTERNATIONAL is a supplier and distributors of Pump, Pump Spares, SS Flanges, Clamps, C-Clip, Silicone products, Gaskets, Oil Seals, Bellows, Diaphragms, Hoses, O-Rings, , Cords, Suction Cups, PTFE Envelope Gaskets, Rubber sheets, Mechanical seal, Rotary Joints, Non-Sparking Tools, Nylon, Nylatron Rod etc.,

Our company head office located in Hosur, Tamil Nadu with branches spread all over in Southern Region.

Motto

Our business is built on a customer-centric approach, ensuring to afford unparalleled experience to our clientele through our supplies and services.

Sectors

The Sectors we focus on Food Industries, Chemical Industries, Beverages & Breweries, Plastics manufacturer, Pharma Companies, Oil and Gas, Dye manufacturer, Paint Industries, Power plant, Herbal extract manufacturer, Chillers, etc.

Improve response time for customer queries.

Our business committed to improving the customer experience through convenience, accuracy of orders and timely delivery.

Getting customer feedback to create a strong bond

Mechanical Seals

The functions of the **mechanical seal** is to give a high level of safety by preventing fluid leaks and maintain pressure, between the rotating shaft, or shaft sleeve, and the pump casing.

Types of seals, includes

- Multi-spring seals
- Wave spring seals
- Conical spring seals
- Bellows seals
- Cartridge seals
- Balanced & unbalanced seals
- Grundfos seals

It's mainly used to reduces the risk of accidents, environmental damage and equipment failure.

Single Spring

Conical Spring

Wave Spring

Rubber Bellow

Multi Spring

Teflon Bellow

Metal Bellow

Cartridge Seals

Double Cartridge seal

Grundfos

Grundfos - Star Type

Agitator Reactor Seal

Rotary Union & Rotary Joint

A **rotary union**, also known as a rotary joint or rotary coupling, is a mechanical device that allows the transfer of fluids (liquids or gases) between a stationary part and a rotating part.

Rotary Joint

Rotary Union

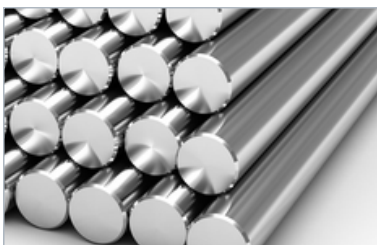

It acts as a seal between the two parts, enabling continuous fluid flow without leakage as one part rotates relative to the other.

Stainless Steel – Listings

Stainless steel is primarily an alloy of iron and carbon, with a minimum of 10.5% chromium, which has High corrosion resistance, non-magnetic, good toughness, and excellent weldability.

Other elements like nickel, molybdenum, manganese, nitrogen and silicon are also often added to enhance specific properties like strength, ductility, and resistance to different types of corrosion.

Austenitic stainless steels grades: SS304 (18/8 stainless) and SS316.

SS Rod

SS Shaft

SS Sleeve

SS Flanges

SS C-Clip

SS Clamps

Tri Clover Clamps

SS Impeller

SS Pump Spare Parts

Tungsten Carbide (TC) Seal Rings

Tungsten Carbide (TC) Seal Rings are ultra-hard, highly durable metallic components used as the mating or rotating faces within mechanical seals to prevent fluid leaks in high-stress industrial machinery.

It deliver outstanding wear resistance, high strength, and reliable sealing performance for the most demanding industrial applications such as **chemical processing, oil & gas, mining, pharmaceuticals, food processing, and power generation.**

Tungsten Carbide (TC) Seal Faces

Tungsten Carbide Seal Faces are engineered for outstanding wear resistance, high strength, and reliable sealing performance in the most demanding industrial applications such as **Chemical processing, Oil & Gas, Mining and slurry pumps, Water and wastewater treatment, Power generation, Food & Beverage, Pharmaceutical industries**

Bead Mill Tungsten Carbide Rings

Bead Mill Tungsten Carbide Rings are precision-engineered to provide superior wear resistance, high strength, and long-lasting performance in high-speed bead milling applications. Offers excellent resistance to wear, corrosion, and erosion, even when processing abrasive slurries.

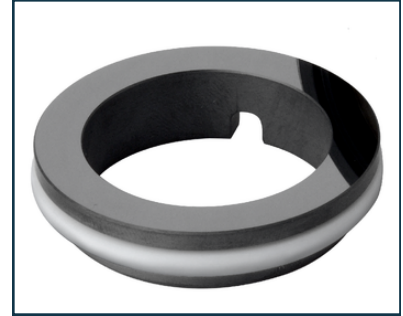

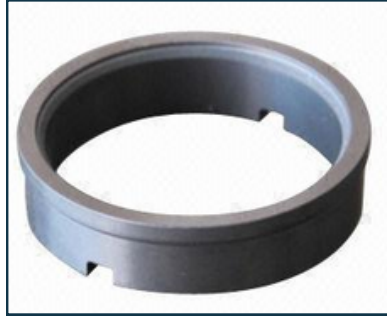

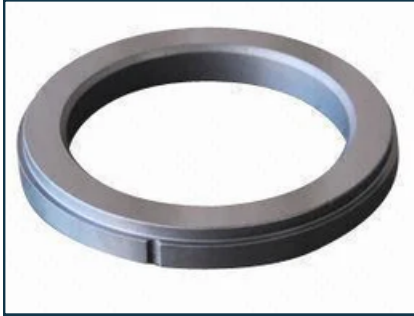

Suitable for use in paint, ink, pigment, chemical, pharmaceutical, ceramic, and mineral processing industries.

Silicon Carbide Seal Rings / Silicon Carbide Seal Faces

Silicon Carbide Seal Rings are precision-engineered to deliver superior wear resistance, excellent corrosion resistance, and reliable sealing performance in the most demanding industrial applications.

Silicon Carbide Seal Faces provide precision-lapped sealing surfaces with exceptional hardness, low friction, and outstanding resistance to wear, corrosion, and thermal shock.

Bearings – SKF, FAG, INA, NTN

Bearings are used to reduce friction between moving parts, allowing for smoother and more efficient operation of machinery.

Types of Bearings:

- Rolling element bearings (ball bearings, roller bearings)
- Plain bearings
- Thrust bearings
- Sleeve bearings

Bearings

Coupling

Coupling is helps to connects two shafts together, allowing for the transmission of power and motion while accommodating misalignment or other issues.

Types of Couplings:

- Rigid Couplings
- Flexible Couplings

Chain Coupling

Jaw Coupling

Spacer Coupling

Elastomers

Elastomers are a class of materials known for their high elasticity, meaning they can stretch and return to their original shape after being deformed.

It includes, FKM, FFKM, PTFE, EPDM, NBR, HNBR, Silicone, PU(Polyurethane), natural rubber etc.

Oil Seal

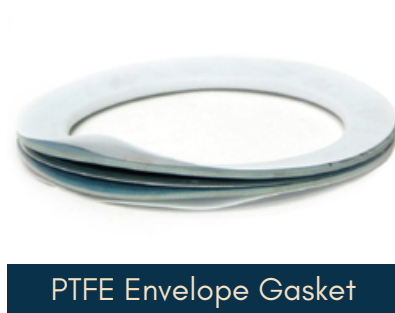

O-Rings

O-Rings

PTFE Gasket

PTFE Envelope Gasket

Champion Gasket

Metallic & Non-Metallic Gasket

Tri clover Gasket

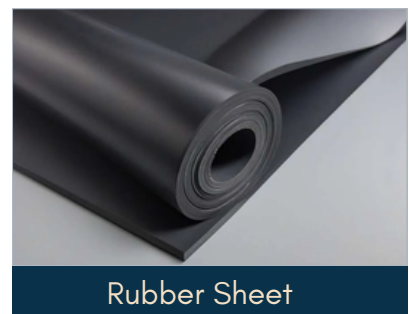

Black Rubber Diaphragm

Rubber Extruded Cord

PU Seal

Rubber Sheet

PTFE Tubes

Nylon Cable Tie

Custom Rubber Products

Elastomers – Silicone

Silicone is a synthetic polymer made from silicon and oxygen, combined with other elements like carbon and hydrogen. It's known for its versatility, heat resistance, and ability to withstand aging.

Silicone Sheet

Silicone Bellows

Extruded Door Gasket

Silicone Inflatable gasket

Silicone Diaphragms

Silicone Endless Gasket

Silicone Sleeves

Silicone Suction Cups

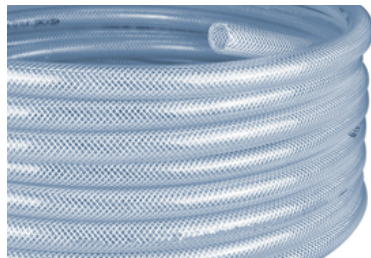

Silicone Custom Product

Hoses – Categorization

Industrial hoses are used for transferring liquids, gases, and even some solids. It designed to handle various substances, like water, chemicals, petroleum products, and food items, and are chosen based on factors like temperature, pressure, and material compatibility.

Carbon Free Hose

Nylon Braided Hose

Food Grade Thunder Hose

Silicone Transparent Tube

Flexible Ducting Hose

Silicone Braided Hose

Springs - Inconel, Stainless Steel

Inconel springs are precision-engineered components made from nickel-chromium alloys, renowned for their exceptional resistance to high temperatures, corrosion, and mechanical stress.

Specific Applications:

- **Aerospace:** Jet engine components, aircraft structures.
- **Nuclear Power:** Reactor components, control rods.
- **Chemical Processing:** Valves, pumps, and other equipment exposed to corrosive chemicals.
- **High-Temperature Furnaces:** Heat-treating equipment, distillation columns.
- **Oil and Gas:** Downhole tools, valves for sour gas applications.
- **Semiconductor Manufacturing:** Vacuum furnaces, high-temperature process equipment.

Common Grades: Inconel X750 and 718

Compression Spring

Torsion Spring

Disc/Belleville Spring

Heavy Duty Kelly Spring

Extension Spring

Auger Conveyor Spring

Conical/Taper Spring

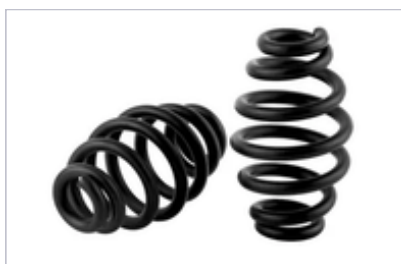

Volute Spring

Wire Forms Spring

Crusher Spring

Taper Spring

Spiral Spring

Pumps – Motor – Gearboxes

Pump is used to moves fluids (liquids or gases), or sometimes slurries, by mechanical action, typically converted from electrical energy.

It used in wide applications in agriculture, food processing, water and wastewater management, chemical & textile industry, pharmaceuticals, and the energy and oil sector.

Mono-block Pump

Lime Slurry Pump

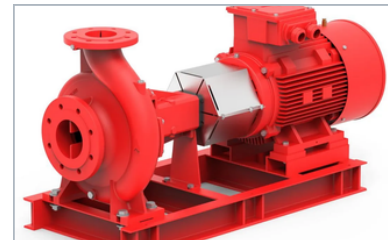

Dosing Pump

Horizontal Axial Flow Pump

Centrifugal Pump

Fire Fighting Pump

Vertical Axial Flow Pump

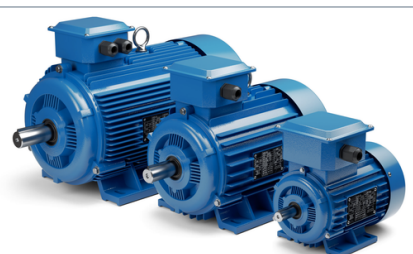

Pump with Priming Chamber

SS Milk Pump with Stand

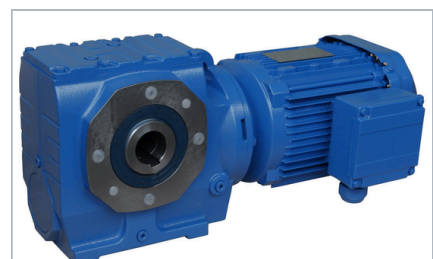

Horizontal Split Case Pump

Motor

A motor is a device that converts electrical energy, into mechanical energy, resulting in motion. Motors are fundamental components in a wide range of applications, from everyday appliances to industrial machinery.

Gearboxes, also known as transmissions or gear reducers, are mechanical devices that transmit power from a rotating source (like an engine or motor) to another component, often changing the torque and speed in the process.

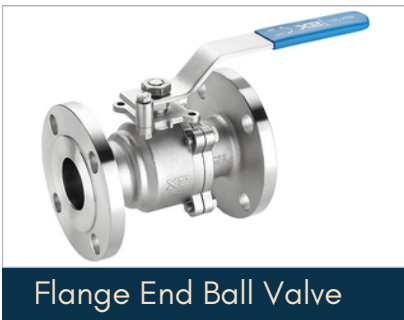

Gearboxes

Valves – Categories

A **valve** is a mechanical device that regulates, directs, or controls the flow of a fluid by opening, closing, or partially obstructing passageways.

Types of Valves:

- **Ball Valves:** Utilize a rotating ball with a bore to control flow.
- **Butterfly Valves:** Employ a rotating disc to regulate flow.
- **Gate Valves:** Use a sliding gate to start/stop flow.
- **Check Valves:** Prevent backflow.
- **Globe Valves:** Use a movable disk to regulate flow.
- **Control Valves:** Regulate flow based on a control signal.

Flange End Ball Valve

Ball Valve

Gate Valve

Rod – CFT, Nylatron, MS

A **rod** is essentially a long, solid piece of material with a circular or round cross-section.

Nylatron is used in rotary lever actuators where unusual shapes are required. heavy-duty caster wheels, normally as a replacement for cast iron or forged steel. plain bearing material, especially in screw conveyor applications.

Nylatron comes in multiple grades designed with added properties, including load bearing, self-lubrication, and wear resistance characteristics.

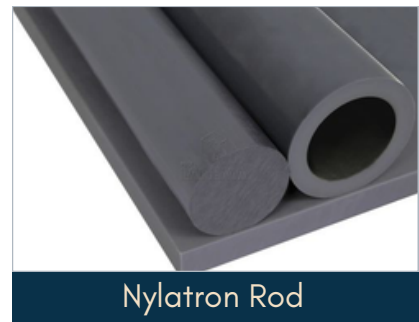

Carbon filled PTFE is primarily used in applications where higher thermal or electrical conductivity is required, over and above conventional PTFE.

This grade also exhibits improved wear life and has very good compression properties, for loading applications.

MS rods are made from mild steel, which has a low carbon content (typically between 0.05% and 0.25%). This low carbon content contributes to its ductility and ease of fabrication.

Advantages:

- The main advantages of using MS rods include their strength, durability, flexibility, weldability, and cost-effectiveness.

Nylatron Rod

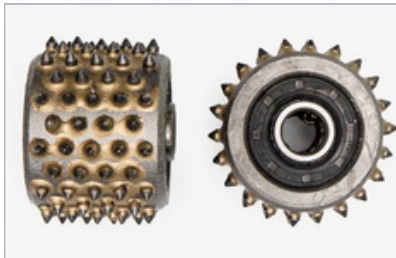

Carbon Filled Teflon Rod

Mild Steel Rod

Additional Products

In addition, few more products on the list were mentioned below:

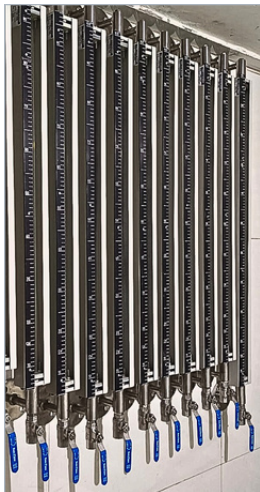

Bush hammer roller with Bearing

Non-Sparking Tools

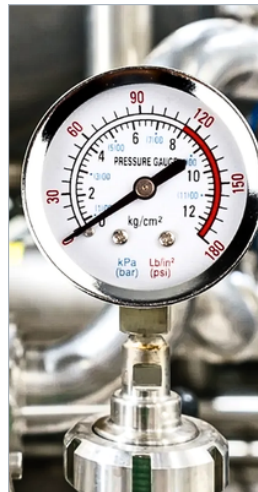

Lithium Battery

Level Indicator

Rotameter

Pressure Gauge

Thermosyphon

Brass Products

Thread Protector

Flange Bearing Safety Cover
